

OES NEWS October 2011

FAREWELL to our Princess

August 31, 2009 – October 27, 2011

The standard poodle, of the OES founder's (former) spouse, Princess, died of internal injuries sustained after being hit by an automobile near the office of Olympic Energy Systems.

Princess was like a child to those of us that knew her. You first saw Princess in our newsletter last year urging folks to Go Solar. We will return to the newsletter next month, which will be in our old format used for 10 years (before going electronic only). Look for these topics:

Battery Conference in Detroit highlights intense investment and entrepreneurship on the "Smart Coast"
China and renewable energy

PV Panel Price Survey (time to take mounting costs seriously...)

TCS Designs expand, firm up, and inch toward production. Intro: The G2 (two row) and the off grid G1

Jonathan

Our President, Jonathan Clemens, is still doing free initial consultations and further (fee based) site assessments, designs, and development of systems, both on-grid and off-grid, though the company is pursuing product development of its Tensioned Cable System for mounting solar panels on roofs and the ground without penetrations or foundations, and will be emphasizing off-grid electric vehicle charging stations energized from solar.
